

**DESCRIPTION**

Microlite® AA Blankets are lightweight, flexible, thermal and acoustic insulating materials designed for use where space and weight savings are a critical consideration.

Microlite AA Blankets are furnished with a water repellent thermosetting phenolic binder which is flame resistant and non-punking, and provide excellent dimensional stability. An additive is used to provide water repellency to the cured blanket for service in areas where high altitude moisture condensation may occur. In circumstances where moisture is not a concern, plain phenolic binder can be specified.

**ADVANTAGES**

Microlite AA Blankets offer superior acoustic and thermal performance per unit weight of insulation used. AA blankets are phenolic bonded, noncombustible, and easily meet the most stringent smoke density, smoke toxicity and total heat release standards.

Because Microlite AA Blankets are non-cellular and moisture-resistant, they will not support biological growth or vermin. They also provide excellent stability with age. The exceptional resiliency of the glass fibers prevents vibrational settling and retains their excellent sound attenuation and thermal properties.

**AVAILABLE FORMS**

Standard Microlite AA Blankets are furnished in different densities, in 72" wide rolls, with a water repellent binder. If Microlite AA with plain phenolic binder is desired, it is available on a made-to-order basis.

**STANDARD THICKNESSES & DENSITIES**

Apparent Density		Thickness		Color
lbs/ft <sup>3</sup>	kg/m <sup>3</sup>	in	mm	
0.42	6.7	½ & 1	12.7 & 25.4	Amber
0.60	9.6	½ & 1	12.7 & 25.4	Green
1.00	16.0	1	25.4	Orange
1.50	24.0	¾	9.5	Amber

\* Other sizes may be available upon request.

**TYPE**

Flexible Blanket

**TEMPERATURE LIMIT**

450°F (232°C)

**APPLICATIONS**

Formed from resin bonded borosilicate 902 biosoluble glass fibers, Microlite AA Blankets provide optimum thermal and acoustic insulating performance for applications up to 450°F. These blankets help control thermal and acoustic transmission in a variety of aerospace applications, and are particularly well suited for insulating the fuselage wall cavities of commercial and private aircraft.

- Aerospace
- Fuselage Wall Cavities of Aircraft

**PROPERTIES**

- Biosoluble Chemistry
- Superior Acoustics
- Water Repellent
- Low Heat Transfer
- Noncombustible
- Excellent Dimensional Stability
- Exceptionally Low Smoke and Toxicity

\*Test conducted on 3 layers of insulation, per ASTM E90

### ANECHOIC TEST CHAMBER

An intensity probe is used for both scanning and point to point mapping of power radiated from a simulated aircraft fuselage. Such techniques measure the attenuation of the overall system as well as the performance of specific elements within the construction.
